PROFILE

I am a detail-oriented E-commerce Logistics student with a strong passion for supply chain management and digital logistics. Skilled in data analysis and leveraging information technology to optimize business processes, I bring hands-on experience from academic projects in supply chain and logistics information systems. I am eager to contribute my expertise in driving operational efficiency and delivering innovative solutions.

Academic Project

Implementing the Odoo ERP system

Automating the entire business process by utilizing various ERP modules to manage purchasing, inventory, sales, and marketing.

Designing warehouse layouts

Creating an effective warehouse layout design with the specified location constraints and existing environmental conditions using the SketchUp application accompanied by warehouse activity simulations within it using the Flexim application.

Building the small business Mochi Mobi

Contribute on building the small business Mochi Mobi by applying STP analysis and digital marketing strategies through various social media as advertising media.

Designing UI/UX using Figma

Designing a web prototype before starting project development using the Figma application for the UI/UX simulation process.

Product development with packaging design

Develop packaging functions as a marketing method through brand visual communication and enhancing the appeal of local products through innovative packaging design.

Organizational Experience

Member of the Competition Division at the Multimedia Nusantara Polytechnic Festival

2023 - 2024

Responsible for recruiting participants through effective communication strategies and promoting the event across various social media platforms.
